

Experience wood, shape the future: gain practical experience with us!

Every year, we welcome young wood enthusiasts and offer them the opportunity to grow both personally and professionally. Our interns are not limited to observing; they can actively participate in exciting and practical projects.

A current example? Against the impressive backdrop of Plan de Corones in South Tyrol, three of our interns from Bern University of Applied Sciences were involved in the Geometria Alpina art project by Alex Dorici, which is over 7 metres high and has a 60° incline. They accompanied all phases – from the preparation of the components to the final assembly – with great competence and professionalism.

Our enterprise is not divided into isolated departments: interns can get to know all departments, from the technical offices to the carpentry and joinery workshops to assembly on the construction site. This is a unique opportunity to see the entire process and really understand how a wood project comes into being.

Our company is based in Ticino, where Italian is the main language spoken. Many employees also speak English and German, which makes the working environment pleasant and stimulating at the same time: learning a new language or using a different language becomes an opportunity to challenge yourself and step outside your comfort zone.

Would you like to broaden your experience with an enriching professional challenge in another country? Visit our website and contact us for more information.
